| V6.0.16 | 12/2016 | Second minor release | Product Management |
| V7.0.74 | 01/2019 | Major release version 7 | Product Management |

## 4. Changes

This version is a major V7 XPhone Connect release, which is fully compliant to SwyxWare, SwyxIt! and Visual Contacts in version 11.x.

Main changes of XPhone Connect version 7, while considering interoperability with Swyx software environment:

- Search string with start in the middle of a name is also now supported.
- Display of the installed operating mode on the start page of the WebAdmin
- Support and release for SQL Server 2017
- Redesign and extension of the email admin alerts
- Log level is now also written to the event log
- Reset Log Settings
- Support of SMS Swisscom LA REST interface

## 5. Supported Products

| Type | Product | Preferred Version |
|---|---|---|
| Server | SwyxWare | 11.x<br><br>tested with SwyxWare 11.32 |
| Client | SwyxIt! | 11.x |
| Server OS | Windows Server | 2008 R2 (SP1), 2012, 2012 R2, 2016 |
| Desktop OS | Windows | 7, 8, 8.1, 10 |

We recommend customers use the "Preferred Version" for the given products. The preferred software versions offer tested and confirmed level of functionality. However, the devices might also operate with older or newer software version with the caveat that recently added interoperability or advanced features may not be possible when using these versions. In cases, if a defect is found when using other versions, it may be necessary to update to the supported version.

## 6. System Requirements

To enable a stable performance of XPhone Connect, server administrators should observe the following table listing the system requirements for XPhone Connect (not including SwyxWare):

| Max. Users | RAM | Disk Space | CPU Cores | CPU Cores (virtualised) |
|---|---|---|---|---|
| 20 | 1 GB | 20 GB | 2<br>(for example Intel i3) | 1 |
| 100 | 1 GB | 40 GB | 2<br>(for example Intel i3) | 1 |

In case it is intended to install SwyxWare and XPhone Connect on the same hardware, the combined system requirements of SwyxWare and XPhone Connect need to be fulfilled.

## 7. Known Issues

SwyxIt! does not transmit the current Windows user name to XPhone Connect Directory so that this authentication concept is not available to basic windows users.

## 8. Support

The Support for the XPhone Connect Directory is handled through the regular Swyx Support process.

This release does not contain availability of DATEV integration. This functionality will be released separately.

## 9. Documentation

The current version of XPhone Connect Directory is available in the C4B web portal.
